

TYPE BT DISCONNECT SWITCHES

060-190108.1
(Rev. of 060-170331.1)

OUTDOOR HOOKSTICK OPERATED (SUBSTATION APPLICATIONS)

- Vertical or underhung mounting
- 7.5KV through 161KV
- 600A through 2000A
(4000 Amps through 34.5KV)
- Single, tandem, and
low-profile styles

MANUFACTURER OF HIGH VOLTAGE PRODUCTS SINCE 1914
1.800.426.4380

FEATURES OF TYPE BT DISCONNECT SWITCH

- Truss-type blade for extra strength.
- Wide, sturdy blade guide.
- Large pull ring - easy to hook.
- Sturdy blade pryout opens switch easily.
- Tongue-type contact provides double contact surfaces.
- All contact surfaces are silver plated.
- All current carrying parts are hard-drawn copper, cast copper, or high conductivity bronze.
- Available in single, tandem, and low-profile styles.
- Ratings for 7.5kV to 161kV - from 600 to 2000 amperes (4000 amps through 34.5kV).
- Switches rated 1200 and 2000 amperes are available with either 30°C or 53°C maximum temperature rise design.
- 600 ampere rated switches are available with the heavier 30°C rise design only.
- Wood crate packaging.

Design principles incorporated in Royal's type BT disconnect switch have an established field-service record of more than 30 years.

The blade is of truss-type construction providing an exceptionally sturdy blade. The latch tips are flared to form a wide guide for closing the blade. The pull ring is large for easy hook-stick operation.

Integral with the pull ring is an effective latch release and blade pry-out. This makes opening the switch easy, even when coated with ice or after years of exposure to contaminated or corrosive atmospheres.

The type BT switch is also offered with a current rating of 4000 amperes; for further information on this rating consult the factory.

CONTACTS

Contacts of the type BT are tongue type. The latch tips are flared to provide the wide blade guide. The guide fingers overlap the blade in the closed position to insure a positive latch. In opening, the pull ring separates the latch fingers and acts as pryout for the blade. All current carrying parts are made of hard-drawn copper, cast copper, or high-conductivity bronze. All contacts are silver plated. Silver inserts are available.

Blades

The blade of the BT switch is of a truss type construction. This gives the blade unusual lateral strength. The two blade members straddle the contact tongue to provide two contact surfaces. The blades are of hard-drawn copper. Blade stops will be furnished without charge when specified on your order.

Bases

Switch bases through 69kV are single steel channel. Standard dimensions are listed but any base length and drilling can be furnished. On switches rated 115kV and above, built-up girder bases are furnished.

For crossarm mounting, bases can be drilled to accommodate standard pole-top diameters. Bases are hot-dipped galvanized after fabrication.

Insulators

Type BT switches are mounted on ANSI standard station-post insulators

Rating Standards

Type BT switches will carry full rated load continuously in accordance with latest ANSI standards. These switches have also been tested in accordance with and will meet short-time current ratings for outdoor switches, per ANSI standards.

TYPE BT DISCONNECT SWITCH OUTDOOR HOOK-OPERATED SINGLE POLE, SINGLE THROW

- Terminal pads are drilled 9/16" on standard 1 3/4" centers unless otherwise requested.
- Terminal connectors can be supplied at an additional cost.
- Channel bases are furnished thru 69kV and girder bases above 69kV. Holes sizes and locations are provided as required.
- Certified construction drawings are furnished.
- Blade stops are available.

TYPE BT TANDEM OUTDOOR HOOK-OPERATED SINGLE POLE, DOUBLE BLADE

- Terminal pads are drilled 9/16" on standard 1 3/4" centers unless otherwise requested.
- Terminal connectors can be supplied at an additional cost.
- Certified construction drawings are furnished.
- 90 degree blade stops furnished on top switch. Specify if required on bottom switch.
- Center pad for right hand or left hand take-off.

MANUFACTURER OF HIGH VOLTAGE PRODUCTS SINCE 1914
1.800.426.4380

TYPE BTBP SUBSTATION CLASS REGULATOR BY-PASS DISCONNECT SWITCH

The type **BTBP** is a cleanly designed three-blade substation disconnect switch appropriate for by-passing substation regulators. The live parts are the same as the type BT switch. The simple design and operation features make it dependable over many years of service. Reference dimensions and ratings on the next page.

MANUFACTURER OF HIGH VOLTAGE PRODUCTS SINCE 1914
1.800.426.4380

TYPE BTBP SUBSTATION CLASS REGULATOR BY-PASS DISCONNECT SWITCH

- Available 7.5 kV – 34.5 kV, 600A – 2000A continuous.
- Only appropriate for bypassing regulators.
- All contacts silver-plated.
- All live parts of hard-drawn copper, cast copper, or high conductivity bronze.
- Terminals are NEMA Standard drilling.
- Blade stops are available.
- Base is hot dipped galvanized.
- Standard dimensions are listed, but any base length and drilling can be furnished.
